

From: Matthew Sparks - Assistant Head (Compliance & Media Services)

University of Glamorgan have been a Planet eStream customer since summer 2008 and recently upgraded to version 5.

Matthew told us "Our original requirements were focused on recording off-air Freeview content and delivering it on campus. However, we realised that Planet eStream provided a cost effective solution to many of our streaming media needs. Our use of the system now extends to live and on demand availability of lectures and graduation ceremonies and using it as a source of video clips for flash learning objects. Version 5 has brought many new features such as a large number of link and embed options, which we are still discovering how to exploit. We have been assisted by the online help and the very enthusiastic support team at Planet".
