

From: Paul Flynn – ICT Development Manager

Stockton Riverside College have been a Planet eStream customer since May 2005 and upgraded to version 5 during summer 2011. We caught up with Paul to see what he had been using the product for and what tangible benefits he felt that he and other staff had gained from the product.

Paul explained that Stockton Riverside College use Planet eStream as their content streaming service for videos, image banks and PowerPoint presentations. They also make a lot of use of the ability to embed content to their VLE, to the web and to business applications.

Paul felt that the immediate access to streamed content and the fact that the content uploaded was wholly under the control of the content creator had been a great benefit to the college. He went on to say "For us it is safe social sharing of third party and user generated content. It is our 'YouTube' and 'Facebook' in one solution. The responsiveness and support from sales to technical support and development has been a 'Planet eStream' for us!"
